

API STRUCTURE DOCUMENTATION

MEKA HRISHI TEJA CHOWDARY

1. Authentication Module

APIs

POST /api/auth/register

Purpose: Register new users

POST /api/auth/login

Purpose: Authenticate users and generate JWT token

GET /api/auth/profile

Purpose: Retrieve authenticated user profile

Features

JWT Authentication

Password Security

Protected Routes

User Authorization

2. User Profile Module

APIs

GET /api/auth/profile

Purpose: Fetch authenticated user profile details

Features

User profile retrieval

Protected profile access

User-specific data handling

JWT token validation

3. User Management Module

Features

User Registration

User Login

JWT Token Generation

Protected User Access

Authentication Middleware

Database Collection

Users

4. Virtual Try-On Module

APIs

POST /api/tryOnRoutes/upload/tryon

Purpose: Upload original and generated virtual try-on images

GET /api/tryOnRoutes/tryon/history

Purpose: Retrieve user try-on history

DELETE /api/tryOnRoutes/tryon/:id

Purpose: Delete try-on history item

Features

Virtual try-on image upload

Try-on history storage

User-specific try-on management

Cloudinary image handling

5. Wishlist Module

APIs

POST /api/wishlist

Purpose: Add product to wishlist

GET /api/wishlist

Purpose: Retrieve wishlist items

DELETE /api/wishlist/:id

Purpose: Remove item from wishlist

Features

Wishlist management

Product bookmarking

User-specific wishlist storage

6. Wardrobe Module

APIs

POST /api/wardrobe

Purpose: Add clothing item to wardrobe

GET /api/wardrobe

Purpose: Retrieve wardrobe items

DELETE /api/wardrobe/:id

Purpose: Delete wardrobe item

Features

Digital wardrobe management

Clothing organization

User-specific wardrobe handling

7. Image Storage Module

APIs

POST /api/upload/image

Purpose: Upload images using Cloudinary integration

Features

Cloudinary Integration

CDN Optimization

Secure Cloud Image Storage

Image Upload Handling

Media Management

File Validation

File Size Restrictions

8. Middleware Module

Authentication Middleware

Purpose: Protect backend APIs using JWT verification

Upload Middleware

Purpose: Handle image uploads and validation

Features

JWT verification

Route protection

Image validation

File size limits

Cloudinary storage integration

9. Database Module

Collections

Users

Wishlist

Wardrobe

TryOn

Features

MongoDB Integration

Mongoose Schemas

Backend Data Management

User-Specific Storage

10. Backend Technologies Used

Component	Technology
Backend Framework	Node.js + Express
Database	MongoDB
Authentication	JWT
Cloud Storage	Cloudinary

File Upload

Multer

ODM

Mongoose

API Testing

Postman

11. Backend Features Implemented

JWT Authentication

Protected Routes

MongoDB Integration

Cloudinary Integration

REST API Architecture

Image Upload Handling

Virtual Try-On Support

Wishlist Management

Wardrobe Management

Secure Backend Middleware

User Profile Handling
