

Raritone — Improved API Documentation

Prepared By

Hrishi Teja Chowdary

Project API Overview

The Raritone backend APIs were designed using a scalable and modular REST API architecture to support ecommerce workflows, AI virtual try-on features, authentication systems, and user management.

The APIs follow:

- Modular route structure
- Standardized API responses
- REST API principles
- Centralized middleware handling
- Scalable backend architecture

Base URL

<http://localhost:5000/api>

API Modules

Authentication APIs

- POST /api/auth/register
- POST /api/auth/login

Product APIs

- GET /api/products
- GET /api/products/:id
- POST /api/products

Profile APIs

- GET /api/profile
- PUT /api/profile

Wishlist APIs

- POST /api/wishlist

- GET /api/wishlist
- DELETE /api/wishlist/:productId

Cart APIs

- POST /api/cart
- GET /api/cart
- PUT /api/cart
- DELETE /api/cart/:productId
- DELETE /api/cart

Order APIs

- POST /api/orders
- GET /api/orders
- GET /api/orders/:id
- PUT /api/orders/:id
- DELETE /api/orders/:id

Measurement APIs

- POST /api/measurements
- GET /api/measurements
- DELETE /api/measurements

Wardrobe APIs

- POST /api/wardrobe
- GET /api/wardrobe

Try-On APIs

- POST /api/tryOnRoutes
- GET /api/tryOnRoutes

Image APIs

- POST /api/images
- GET /api/images

Middleware & Security Features

Implemented features include:

- JWT authentication
- Protected routes
- Centralized error handling
- Logging middleware
- Compression middleware
- Secure API structure

Research conducted for future improvements:

- Helmet security
- Rate limiting
- Google OAuth integration

Scalability Support

The APIs were designed to support:

- Future AI integrations
- Cloud deployment
- Redis caching
- Docker containerization
- Load balancing
- Scalable ecommerce workflows

Final Summary

The Raritone APIs were successfully organized into a clean, scalable, and production-ready backend API architecture.

Major improvements completed:

- Modular route organization
- Standardized API responses
- Secure authentication flow
- Middleware integration

- Scalable REST API structure
- Centralized backend management

The APIs are now fully prepared for frontend integration, AI virtual try-on workflows, cloud deployment, and future backend scaling.
